

BrightPath Tech - Proposal

Response to RFP-2026-017: Cloud Procurement Analytics Platform for Northwind Retail Group
Submission date: 2026-02-26 | Fictional document for classroom use

1. Executive Summary & Understanding of Requirement

BrightPath Tech offers a fast, affordable way to get procurement dashboards live in weeks, not months. We use a low-code analytics stack that lets Northwind see spend data quickly and cheaply.

We understand Northwind wants better visibility of spend and supplier performance.

2. Proposed Solution & Implementation Approach

We will deploy our BrightBoard SaaS product, pre-configured with standard procurement dashboards. Data is loaded from CSV exports that Northwind uploads weekly; an API connector for SAP is on our roadmap.

The platform runs on a single-region cloud deployment and is suitable for most mid-sized customers. Performance testing for Northwind's data volume has not yet been carried out.

3. Timeline, Team Structure & Milestones

Phase	Timing	Milestone
Kick-off & data upload	Weeks 1-2	First data loaded
Dashboard configuration	Weeks 3-8	Dashboards live
Training & go-live	Weeks 9-12	Go-live

Team: Project manager (part-time) and 2 consultants.

4. Pricing

Item	Cost (USD)
BrightBoard subscription (3 years)	\$270,000
Setup & configuration	\$85,000
Training (remote)	\$15,000
Total	\$370,000

Assumptions:

- CSV exports are prepared and cleaned by Northwind.
- Additional connectors and custom dashboards are quoted separately.

5. Security, Compliance & Risk Controls

- We follow industry best practices for security.
- Data is encrypted. ISO 27001 certification is planned for 2027.
- Password login; SSO is available on the enterprise tier (not included in this price).

Risk management:

Not provided.

6. Support Model, Experience & References

Support: Email support during business hours (US Eastern time), best-effort response. A shared customer community forum and a library of how-to videos are included. Phone support, named account management and uptime SLAs are only available on the enterprise tier, which is not part of this offer. Product updates are released monthly and applied automatically.

Relevant experience: BrightPath Tech was founded in 2024. We have completed two dashboard projects for small e-commerce companies, each with fewer than 200 suppliers and a single business unit. We have not yet delivered for a retailer of Northwind's size, but our team is highly motivated and learns quickly. We are keen to make Northwind a flagship customer and will offer a 10% discount on year-two subscription fees in exchange for a public case study.
